## SOME RULES ABOUT TULIPS

1. Planting in open, windswept places is inadvisable, as the blooms suffer from being blown about.
2. Whenever possible, avoid planting tulips in a location where they were planted the previous year.
3. Planting of mixed colors seldom gives satisfactory results. Where a wide range of colors is desired, group or spot planting of individual varieties is best.
4. Although many tulips bloom undisturbed for years, some authorities recommend that new bulbs be planted each season.

GOLDEN AGE

When tulips are left in the ground too long, they are apt to crowd each other and become exhausted. In any event, they should be lifted at least every three years. Tulip bulbs may be lifted as soon as the tops are withered or limp. They should be stored immediately in well-ventilated boxes or in dry sand, sawdust or peat moss. Put in cool, airy room or cellar. Don't expose freshly dug bulbs to sun. Cut the flowers as soon as they fade to save the strength of the bulb. When cutting for indoors, let the foliage remain.

### SPECIAL NOTES ON NARCISSUS

Daffodils last for years and multiply rapidly. They are unusually effective for naturalizing in lawns or woodland spots, giving the impression of belonging there. However, in small gardens, grouped plantings of separate varieties will also give a charming effect at the time when little else is in bloom. Plant daffodils as soon as they are available. The bulbs should be given a chance to establish their long roots before cold weather for the best bloom. Plant where they are to remain, and allow plenty of space between

### BULBOUS IRIS

More and more popular each year. Yield quantities of gorgeous, orchid-like blooms in wide range of beautiful pastel colors. Very easy to grow . . . and not at all fussy about soil. Valuable as cut flowers and also lend themselves to display garden planting.

bulbs, as they increase rapidly under proper conditions. A slightly sheltered spot, without too much sun, is best. Daffodils are best when left undisturbed for years, but when clumps get to 20 or 30 bulbs they should be divided. If it is necessary to lift the bulbs, it should be done as soon as the foliage has withered. The digging and replanting should be done at the same time. While the bulbs are out of the ground, keep them away from sunlight, and avoid bruising them.

### PROTECT YOUR BULBS

Now your valuable bulbs can be protected—in the ground and in storage—against the ravages of moles, mice and fungus disease. When you are in our store making your selection of new bulbs, be sure to ask about this special protective treatment.

# NEXT YEAR'S LAWN IN YOUR HANDS Now!

**CAPITOL CITY LAWN SEED**—The finest mixture of quality grasses. 1 lb.-\$1.25, 5 lbs.-\$6.00, 10 lbs.-\$11.50.

**CHARTER OAK LAWN SEED**—1 lb.-95c, 5 lbs.-\$4.50, 10 lbs.-\$8.50.

**SHADY NOOK LAWN SEED**—Adapted to those places which receive little or no sun. 1 lb.-\$1.20, 5 lbs.-\$5.75, 10 lbs.-\$11.10.

At this time of year, weather is ideal for quick germination and development of grass. The seeds lodge in warm soil, and the temperature variation between warm days and cool nights is extremely helpful. Autumn rains, generally adequate, are also gentle, and the soil absorbs them with less washing and drowning of the seedlings.

As the experts point out, fall seeding is also a powerful blow against weeds. Fall is the ideal growing season for grass, but it is also the season when weeds are least active. Annual weeds have passed their maturity and are dying; perennials are becoming dormant. So their competition is less than at any other time of the year, allowing grass to develop unhampered.
